

White Paper for 'SOS Management' Feature

Product Feature – SOS Management

While stationed at the physical workplace, more and more people continue to work on-the-move: out in the field or travelling.

Accidents and emergencies don't come announced. Road accidents are on the rise, streets are often unsafe at night, there are stalkers prowling for victims, a health issue may suddenly become life-threatening—accidents and emergencies tend to always catch us on our back foot.

Now, consider this ...

Your employees—male and / or female—are often travelling to meet channel partners, vendors, company associates, and customers. At times, they also work late in office. Now, you are concerned about the safety and security of your employees and want to reach out in case of any emergency while they are serving your company. You want to ensure an alert (SMS or email notification) is sent to a particular help number in case of an emergency ... you want to get location information regarding the nearest point from where you can reach out if there is an accident ... you want auto voice and camera recording and device answering in Smartphones and Tablets. Again, your employees are accessing sensitive company data via gadgets. What if, in an emergency, the mobile device is lost or misplaced? There is possibility of misuse of company data—confidential information, classified papers, financial documents, research work, etc.—and personal information if the mobile device falls into wrong hands. You are concerned ... How to reach out to employees during an emergency? How to enhance the safety and security of your employees, in particular female employees? If the mobile device is misplaced, can the gadget be auto-locked to protect sensitive company and personal data?

This is where MobiOcean becomes your trusted companion in a mobile-driven environment ... helping you to effectively and efficiently address mobility challenges and security threats!

With MobiOcean, you can reach out and help your employees in SOS / Emergency situations. Supported by a robust security mechanism, MobiOcean allows you to:

Avail nearby Location to reach out in case of

- Ensures reach-out to available individuals closest to the location of distress; processes alert notification to a number of employees placed nearby for immediate assistance

Activate Auto Device Locking

- Allows auto-locking of mobile devices on activating SOS

Activate Auto Voice Recording

- Allows auto voice recording on activating SOS

Activate Auto Front & Rear Camera Recording

- Ensures live recording (of emergency situations, life threatening events induced by criminal behaviour, etc.); simple pressing of the SOS button starts auto front and back camera recording, with live report delivered to the Administrator for appropriate action

Activate Auto Device Answering
